

Theme 4: Role of Science in Adaptive Development

~ Define/What is the role of science in developing coherent and supportive policy? ~

- Adaptation Forum 2010

- 21 October 2010

- Bangkok, Thailand

- Kazuya Yasuhara

- Ibaraki University, Mito, Ibaraki, Japan

Content

- 1. Issues in adaptive support to developing countries
- 2. Role of science for adaptive development
- 3. An example for proving the necessity/effectiveness of adaptation against each issue
- 4. An approach in Japan to this issue

1. Issues in adaptive support to developing countries

Issues in adaptive support to developing countries(1)

- The order of priority of climate change support is lower than development support
 - 経済開発や貧困撲滅が最優先課題
 - 開発プロジェクトの担当者(先進国・途上国とも)が気候変動の問題を認識していない・援助の成果が維持できない可能性
 - 気候変動による開発協力への悪影響や、開発協力による適応への悪影響の認識が(少)ない
- There is the political conflict between developed and developing countries
 - 基金の運営体制、資金配分、プロジェクト選定基準
 - 従来のODAに「追加的な」資金を求める途上国

Issues in adaptive support to developing countries (2)

□ Less recognition from persons in charge of development cooperation

- 気候変動は「環境」分野のみの問題との理解
- 環境分野自体の優先順位の低さ
- UNの国際交渉担当者と開発協力担当者が全く別

□ Less closed cooperation between development and adaptation

- 貧困削減と適応の相関関係の未解明
- 通常の開発協力に含まれる適応効果についての認識がない
- 適応に関連する部局間の連携が(少)ない
- 緩和と適応の担当部局／省庁が異なる

Issues in adaptive support to developing countries (3)

- Few data and information for investigation
 - 基礎的な統計などが(少)なく、かつ共有されない
 - 幅広い分野にリサーチギャップが存在する
 - 将来予測には不確実性が伴う

- No suitable for estimating adaptation
 - 不十分なデータや人材でも活用できる方法が必要
 - 定性的な情報のみでどこまで判断できるか？
 - 開発援助との調整、統合をどう図るか？開発援助が有する適応効果をどう把握・評価するか？

Barriers to adaptation application

☐ Insufficient recognition for adaptation

☐ ➤ Government/
☐ Politics

Shortage of data
(Weather, inf., VA)

Reliable methodology

} ➤ Science/
Technology

☐ Development policy
/Priority

☐ Adaptation fund

} ➤ Negotiation₇

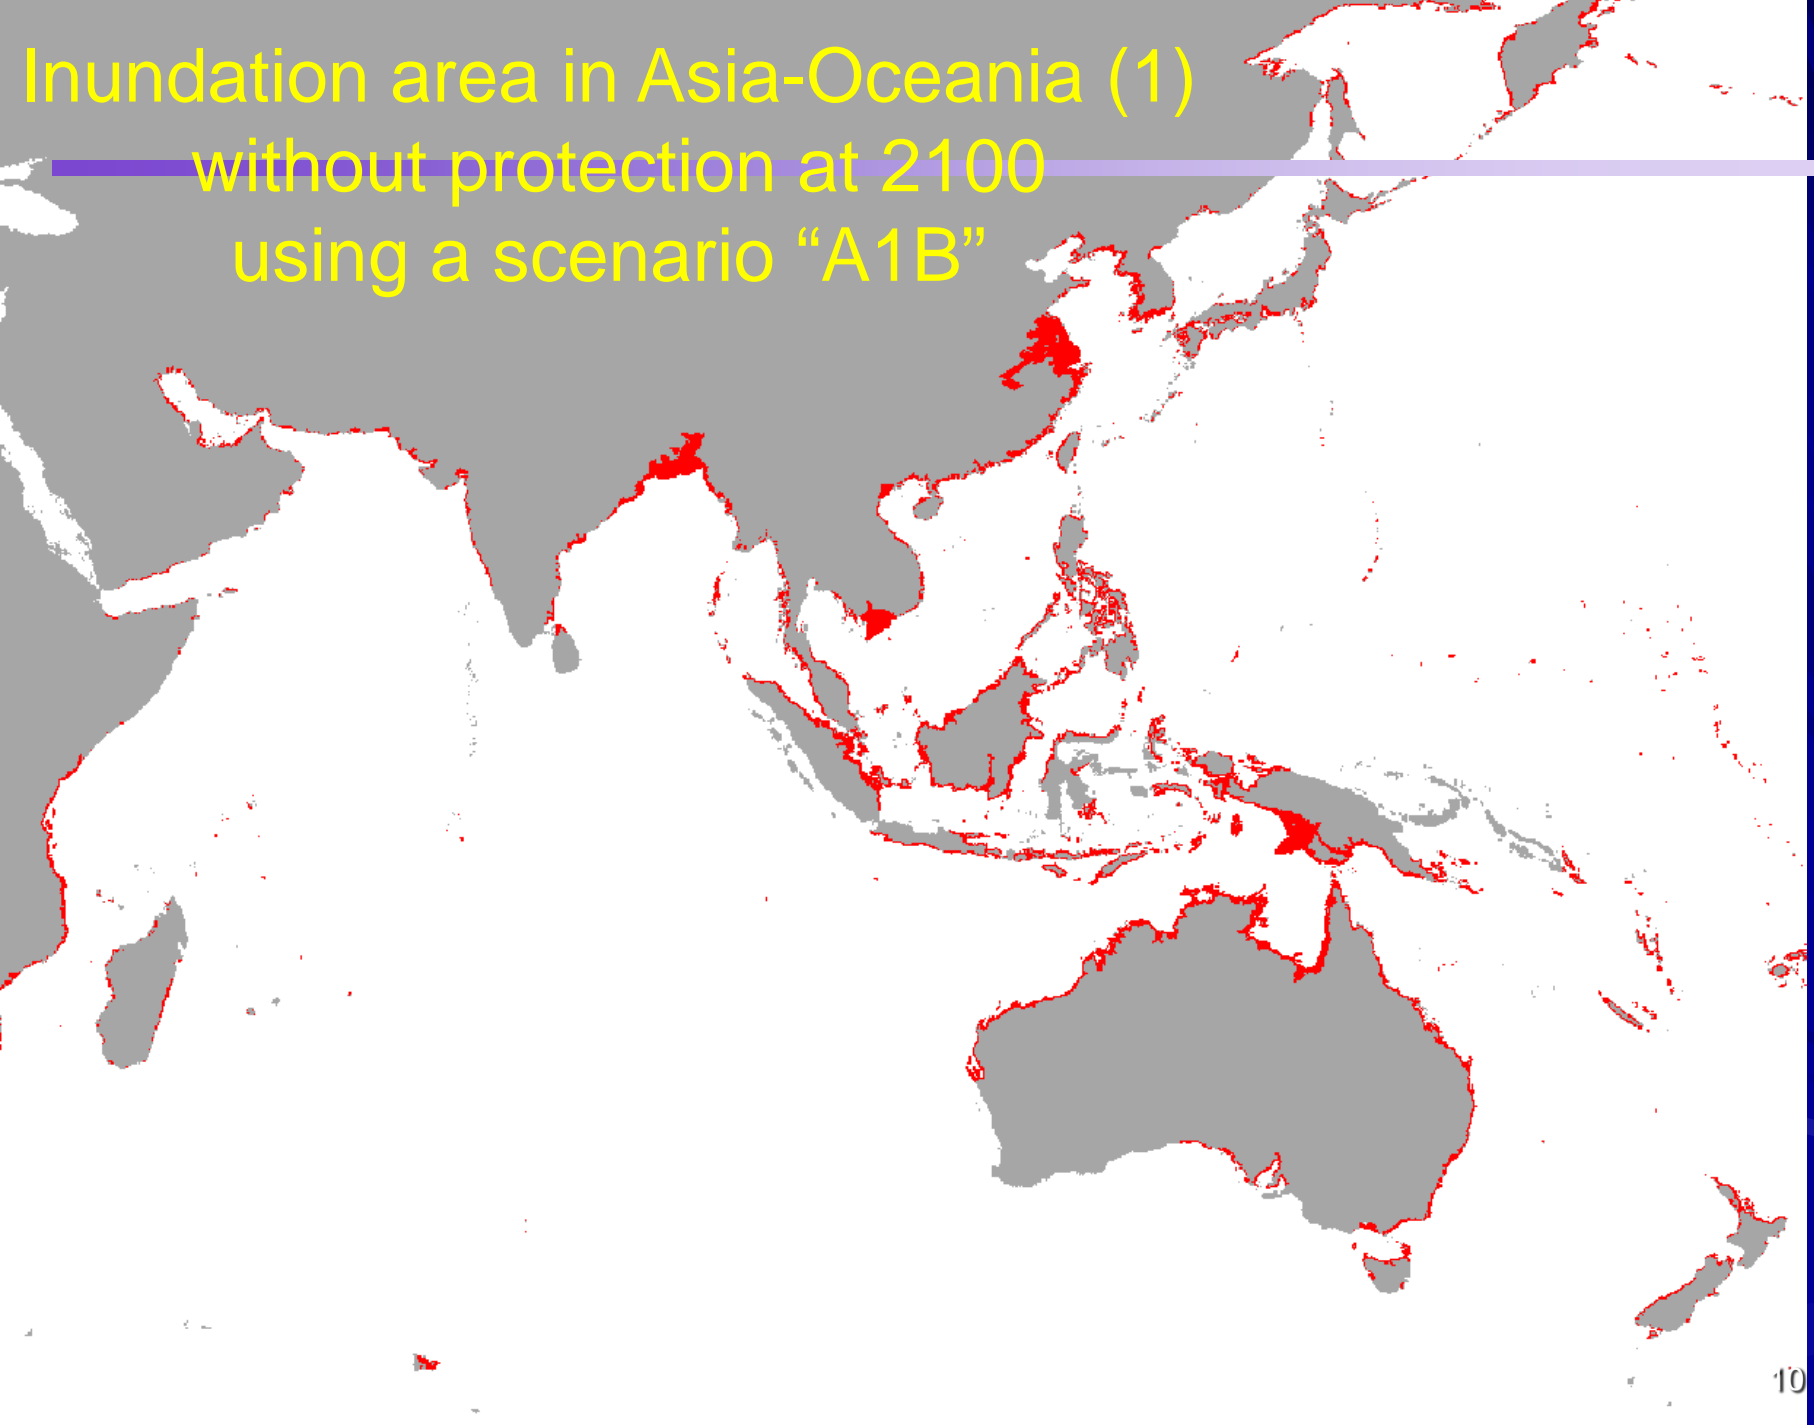

2. Role of science for adaptive development

- Propose adaptive measures suitable for situation of each objective site
- Present the methodology for estimating vulnerability and adaptability
- **Prove the necessity of adaptation against each issue**
- Reflect the scientific and/or engineering achievement to the policy
- Increase the knowledge and wisdom for citizens and policymakers

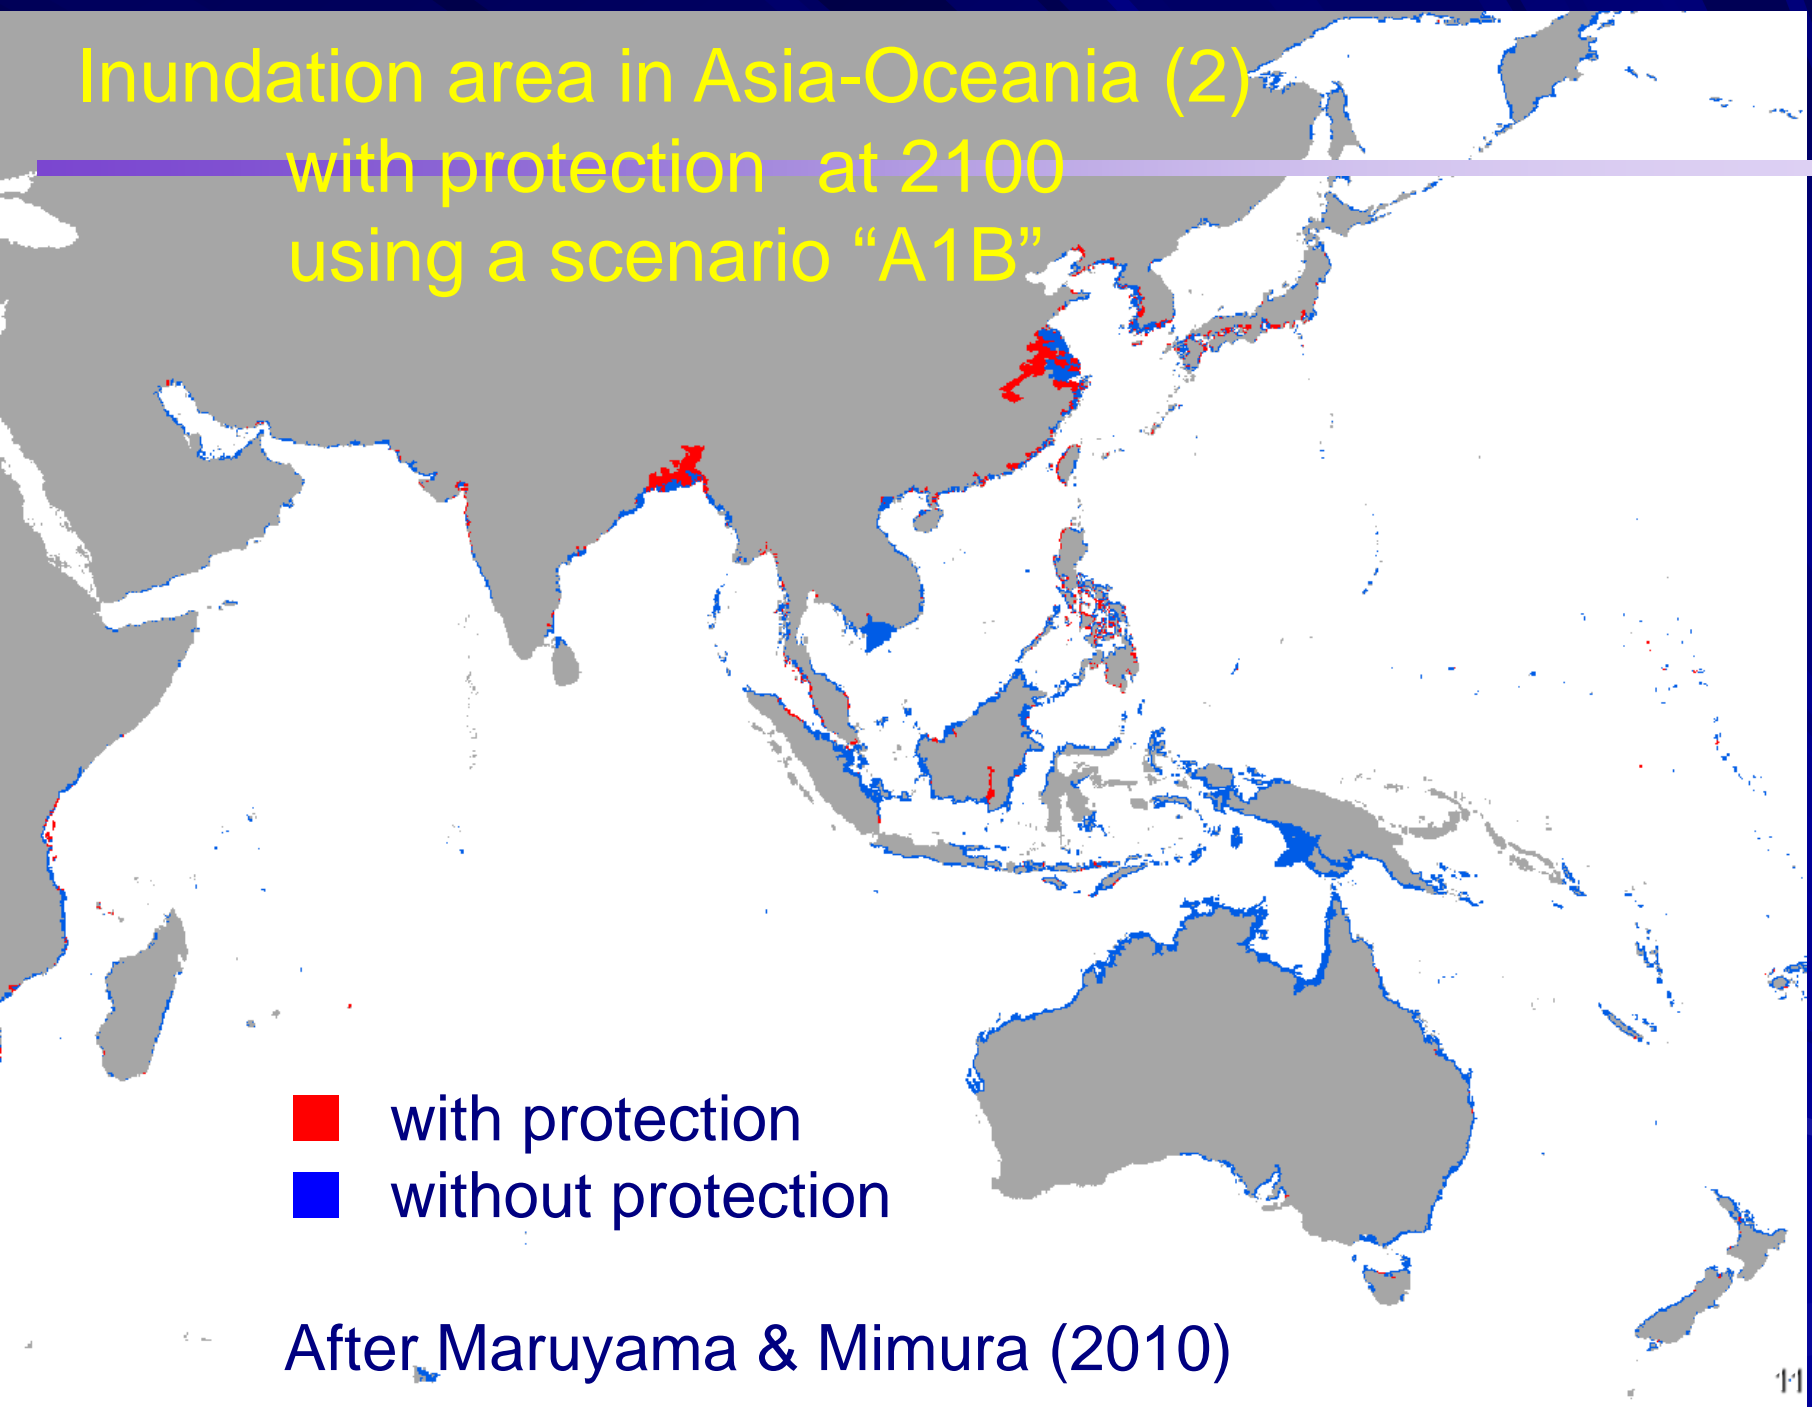

3. An example for proving the
necessity/effectiveness of adaptation
against each issue

Inundation area in Asia-Oceania (1)

without protection at 2100
using a scenario "A1B"

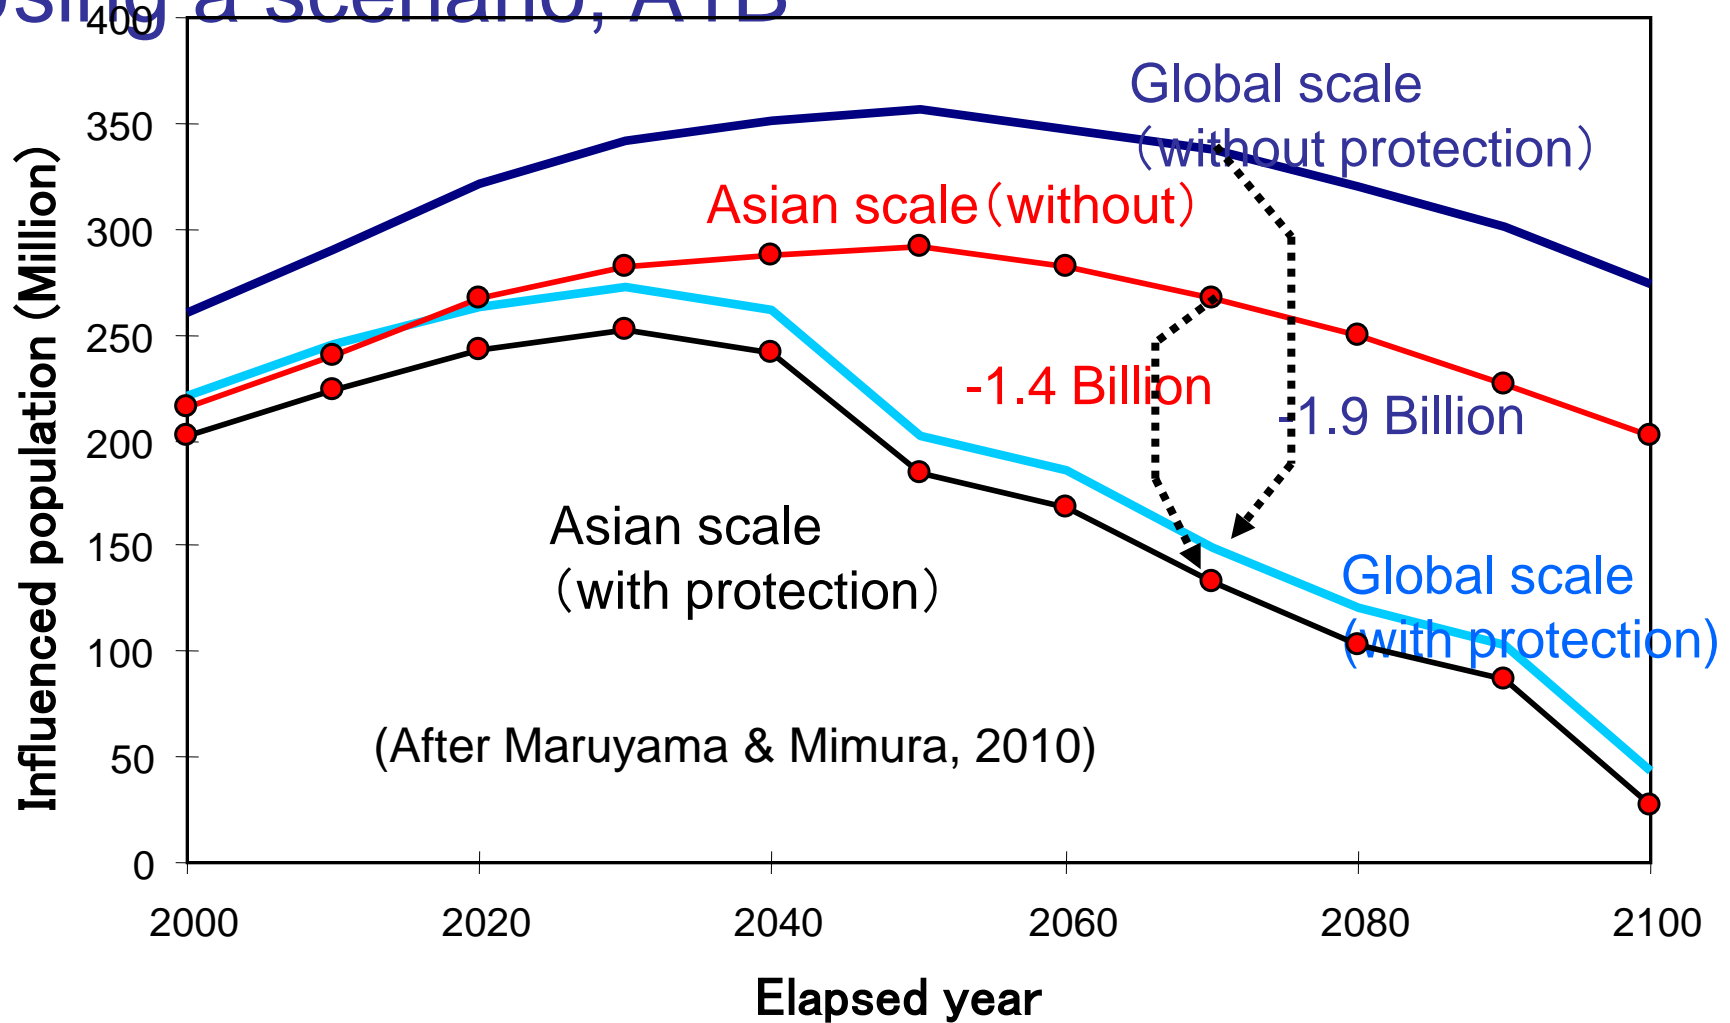

Inundation area in Asia-Oceania (2) with protection at 2100 using a scenario "A1B"

Influenced population in global and Asian scales

Using a scenario, A1B

Decreasing tendency after 2030 in economical damage using A1B is almost the same as in the case using B1 scenario

4. An approach in Japan to this issue

Interim report of strategic project S-4 (FY2006-FY2009)

環境省 地球環境研究総合推進費 戦略的研究開発プロジェクト

Strategic Project S-8 (FY2010–FY2014) in Japan

- Highly advanced methodology for estimating global change impacts
 - Downscaling to the local area
 - Indices for vulnerability and adaptability
 - **International networks for adaptation**
- 
- A diagram consisting of three red arrows pointing from the first three list items to a central point, from which a large red curved arrow points down to the fourth list item.

Socio-economic Scenario

Outline of S-8

Climate Scenerio

Providing scientific finding to
decision making for domestic &
foreign policies

Role of science for adaptive development

- Propose adaptive measures suitable for situation of each objective site
- Present the methodology for estimating vulnerability and adaptability
- Prove the necessity of adaptation against each issue
- Reflect the scientific and/or engineering achievement to the policy
- Increase the knowledge and wisdom for citizens and policymakers
